DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

Specification

1. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Drawings

2. **Figure 1** should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

3. **Claims 1-7** are allowed.

The following is an examiner's statement of reasons for allowance:

This invention relates to a control loop in which an input signal is converted, by multiplication by an integrator value, to an output signal that exhibits on average a constant reference value. The subject of the invention consists in the improvement of the control behavior of a control loop according to Figure 1, in particular if the energy of the input signal deviates greatly from the reference value. This is achieved through a supplementary control loop with derivation of a control signal from the integrator value IW , on the basis of which the signals in the control loop are additionally influenced' (such) that no great deviation exists at the signal magnitudes used for control. In a first embodiment according to Claim 1, see Figure 2, this is achieved by weighting of the difference derived from the output signal and the reference signal, and in a second embodiment according to Claim 4, see Figure 3, by scaling of the input signal.

IBM Technical Disclosure Bulletin Vol. 27, No. IOB, March 1985, pages 6334 and 6335 (submitted by Applicant), is deemed the closest prior art, describes a similar circuit structure, but without derivation of a second control signal from an integrator as in the present Application. The subject of Claims 1 and 4 is therefore novel and is not obvious from the available prior art.

Claims 2 and 3 are dependent on Claim 1, and Claims 5 to 7 on Claim 4, and therefore also allowed by virtue of their dependency on claims 1 and 4.
